

Moldavite illegal or legal?

Many moldavites are being extracted by illegal diggers without the proper permits license from regulators in the Czech Republic or with the property owners permission. These illegal diggers do not pay taxes and leave plundered devastated land behind them. This causes enormous problems for property owners and local communities.

When you buy „legal“ moldavite you support responsible mining of the mineral and the future land rehabilitation. The taxes paid by legal mining operations go to the local communities where the resource is extracted. Our product comes from one of the two legal mining operations in the Czech Republic.

When you buy „illegal“ moldavites you support devastation of the Czech countryside and these ruthless illegal diggers.

MONDAY MORNING s.r.o.

Mysterious Moldavite

There is something mysterious about moldavite. Take it in your hands and maybe you'll feel a touch of cosmic energy as their origin is linked to the Space abysses. Moldavites were formed more than 14,000,000 years ago by the impact of a giant meteorite in the area of Ries in Northern Bavaria, Germany.

Pieces of local sediments, melted by the impact and then cooled again in the air, were catapulted hundreds of kilometres far away. Mostly to South Bohemia. Thanks to their typical olive-green colour and the special structure, moldavites still fascinate men and women all around the world both as rough stones or as a part of jewellery.
